

## Not all Ansell condoms are the same.....

Ansell makes a wide range of condoms with a variety of features designed to enhance sex, whilst still providing maximum protection against pregnancy and STI's (Sexually Transmissible Infections). All Ansell condoms are tested for strength, quality and reliability, and made to a standard of thinness that ensures maximum sensitivity.

Ansell electronically tests every condom for holes and mechanically tests every condom for weaknesses, before they're packaged.

All Ansell condoms comply with the International Standard for condoms (ISO 4074-1:1996 (E) and meet all necessary Department of Health requirements.

Extra water based lubricant such as Ansell Personal Lubricant should always be used with condoms to increase comfort and reduce the risk of breakage.

### Features of Ansell Condoms

#### Lubricated

Ansell condoms are lubricated with a natural silicone lubricant to enhance comfort.

#### Non lubricated

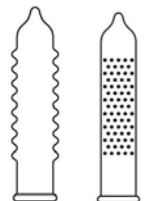

A non-lubricated condom is also available in the Ansell range.

#### Colours

Ansell makes an assortment of coloured condoms to add more fun and variety to lovemaking. Watch out for our LifeStyles Psychedelic condoms.

#### Textured

This range of Ansell condoms are ribbed or studded along the length of the condom for increased pleasure and stimulation. See our LifeStyles Textured, LifeStyles Ribbed and our Contempo Rough Rider condoms.

### **Straight Fit**

This is the basic shape of a condom that includes Chekmate Regular, Contempo Rough Rider and some of our coloured, textured and flavoured range.

### **Easy Fit**

Easy Fit condoms are wider below the reservoir tip of the condom. People who find the straight-sided condoms uncomfortably tight often wear Easy-Fit condoms, as they are easier to put on and more comfortable during use. Our range features a number of Easy-Fit products such as LifeStyles Regular, LifeStyles Ultra Thin for extra sensitivity and other Ansell coloured and flavoured products.

### **Form Fitting**

LifeStyles Form Fitting is an anatomically shaped condom that hugs just under the head of the penis, which means there is less chance of slipping off and allows increased sensitivity.

### **Xtra Pleasure**

This product is designed to be loose at the closed end of the condom. During intercourse this allows the movement of latex to stimulate both partners. Our Xtra Pleasure range is designed in this shape.

### **Range of Sizes**

Choosing the right condom size is another important point to consider. This will also increase comfort and sensitivity and Ansell has a range of sizes available in a variety of shapes.

The tighter fitting products are available in a 49mm nominal width such as the Contempo Exocita.

The regular fit of 52-55mm nominal width is available in straight sided, Easy-Fit, Form Fitting and Xtra Pleasure shapes.

Our largest product is the 57mm nominal width Contempo Mega.

So if you find that a product is not comfortable, see our *Ansell Product Chart* or product selector for more information to help you choose a product that is right for you.

# ANSELL PRODUCT CHART
